Warehouse Management

A warehouse management system (WMS) is software and processes that allow organizations to control and administer warehouse operations from the time goods or materials enter a warehouse until they move out. Operations in a warehouse include inventory management, picking processes and auditing. Our E-CRM includes all modules to do standard WMS process and connected to the order and invoice management system. E-CRM use QR and barcodes for identification warehouse items. **You do not need to buy special equipment, you can use standard mobiles phones and tablets.**

View demo
